Organoleptic specifications

Appearance:

The cheese portion must display a characteristic, uniform, wedge appearance; the piece must display a well defined shape, and the surfaces must be adequately definite. Extended alveolations should not be evident, but only micro alveolations. The paste must be composed, free of cracks indicating a rather serious defect such as late swelling. The appearance must be uniform externally and internally, as the slice comes from one wheel. No residues or extraneous parts must be present.

For portions that include partial rind, this must display a thickness included between 4 and 8 mm. The rind must be clearly visible and clean and it must display at least part of the Consortium's mark.

Colour:

It must be straw yellow, not particularly bright. It must be homogeneous along the wedge. The rind is natural golden yellow.

There must be no discernible nuances of abnormal colors or indicating technological or preservation defects such as an imperfect maintenance of the vacuum by the packaging.

Flavour:

The typical taste of the product is fragrant, delicate, yet intense and pleasant. It should not be excessively salty, pungent or sour.

Aroma:

The aroma must be that typical of this type of cheese, delicate, intense, pleasant. Pungent, acidulous or moldy odors must not be perceivable both at the level of the rind and of the paste.

Texture:

The cheese must have a compact but not excessive consistency: the paste must be finely grainy. However, the consistency must not be particularly soft.
